

Training Title

Petrochemical Process Plant Equipment Installation Sizing Selection, Operation, Maintenance, Troubleshooting Training

Training Duration

5 days

Training Venue and Dates

Petrochemical Process Plant Equipment, Installation, Sizing, Selection, Operation, Maintenance & Troubleshooting	5	16-20 May	\$3,300	Dubai
Petrochemical Process Plant Equipment, Installation, Sizing, Selection, Operation, Maintenance & Troubleshooting	5	19-23 September	\$3,300	Abu Dhabi
Petrochemical Process Plant Equipment Sizing & Selection	5	26-30 September	\$3,300	Abu Dhabi
Petrochemical Process Plant Equipment, Installation, Sizing, Selection, Operation, Maintenance & Troubleshooting	5	November 28 - December 2	\$3,300	Dubai

In any of the 5 star hotel. The exact venue will be informed soon.

Training Fees

- 3300 US\$ per participant for Public Training includes Materials/Handouts, tea/coffee breaks, refreshments & Buffet Lunch

Training Certificate

Define Management Consultants Certificate of course completion will be issued to all attendees.

Training Introduction & Description

Petrochemical industry is one of the expanding industries all over the world due its high profit and quick turn over. It needs huge investments to fulfill its requirements which are

mainly sophisticated equipment like thermal equipment (boilers, heat exchangers, fired gas heaters...), rotating equipment (pumps, turbines, gas compressors, air blowers.....), catalytic chemical reactors and gas reformers. The course presents the major types of these equipment and highlights their recent technological aspects for installation, operation, maintenance & troubleshooting.

The seminar covers how these equipments operate and provides guidelines and rules that must be followed for a successful operation. Their basic design, operating characteristics, specification, selection criteria, installation and commissioning requirements, advanced fault detection techniques, critical components as well as all their maintenance and troubleshooting methods are covered in detail. This seminar also covers advanced maintenance techniques such as "Used Oil Analysis", and "Vibration Analysis" in detail.

Training Objectives

- To provide a comprehensive understanding of the various types of centrifugal and positive displacement pumps, compressors, valves, actuators, and bearings. Participants will be able to specify, select, commission and maintain these equipment for their applications.
- To describe the benefits of advanced maintenance techniques such as "Used Oil Analysis", and "Vibration Analysis".
- To achieve reduced capital, operating and maintenance costs along with increase in efficiency.
- To lay out the major types of process plant equipment
- To enable attendees to grasp the advanced information in basic design issues for major equipment
- To present the main requirements for installation concerning each type of equipment
- To illustrate the importance of good operability for each type of equipment
- To clarify the vital role of different types of maintenance regimes in successful and continuous production operation
- To present examples of troubleshooting through some case studies

Who Should Attend?

Engineers of any discipline, managers, technician, technologists, and other technical personnel.

Daily Outline

- Pumps
- Centrifugal pump mechanical seals
- Positive displacement pumps
- Diaphragm pumps
- Pump selection
- Pumping system calculations
- Compressors
- Centrifugal and axial compressors
- Compressor auxiliaries, off-design performance, stall and surge
- Intelligent (smart) transmitters
- Advantages of Intelligent Instrumentation
- Stand-alone controllers
- Fieldvue digital valve controller type dvc5000 series
- Fieldvue instruments
- Control valve cavitation
- Actuators, positioners and accessories
- Frequently asked questions
- Bearings
- Used oil analysis
- Vibration analysis, predictive maintenance and diagnostic testing

Thermal Equipment

- Package boilers
- Waste heat boilers
- Fired gas heaters
- Heat exchangers
 - Basic design of different types
 - Installation requirements
 - Safe operation
 - Maintenance and Inspection
 - Troubleshooting (case study)

Rotating Equipment

- Pumps
- Turbines

- **Gas Compressors**
- **Air Blowers**
 - **Basic fundamentals and characteristics of each type**
 - **Installation requirements**
 - **Monitoring equipment condition through vibration analysis, bearing temperature & lubricating oil analysis**
 - **Applying predictive maintenance regime**
 - **Troubleshooting (case study)**

Catalytic Chemical Reactors

- **Shift Converters**
- **Synthesis Gas Reactors**
 - **Basic design issues**
 - **Installation requirements**
 - **Internals & catalyst beds assembly**
 - **Material selection**
 - **Inspection applications**
 - **Troubleshooting (case study)**

Gas Reformers

- **Fired box/tube reformer**
- **Cylindrical vessel reformer**
 - **Basic design issues**
 - **Installation requirements**
 - **Material selection**
 - **Lining systems& material selection**
 - **Maintenance & inspection applications**
 - **Troubleshooting**

Case Studies, Pre & Post Tests, Group Discussions, Last day review will be carried out.
