

**Training Title**

**PIPELINES: DESIGN, INSPECTION & TESTING**

**Training Duration**

5 days

**Training Venue and Dates**

REF ME047	Pipeline: Design Inspection & Testing	5	10 - 14 June 2024	\$5,500	Dubai, UAE
--------------	---------------------------------------	---	----------------------	---------	------------

In any of the 5-star hotels. The exact venue will be informed once finalized.

**Training Fees**

- \$5,500 per participant for Public Training includes Materials/Handouts, tea/coffee breaks, refreshments & Buffet Lunch

**TRAINING DESCRIPTION**

The course will review the basic requirements of the ASME B31 Code for Pressure Piping. Topics include design conditions, pipe sizing, pressure design, flexibility analysis, material, fabrication, examination, testing, and mechanical integrity for existing piping systems, as provided in the API 570 Piping Inspection Code.

**TRAINING OBJECTIVES:**

- To provide the participant with a complete and up-to-date overview of the area of Piping Technology
- The participant will learn the design, fabrication, examination, and testing requirements of ASME B31
- Familiarizing the participant with the related standards for inspection and repair of piping systems that have been in service, as provided in API 570, Piping Inspection Code
- The participant will gain a deep understanding of the physical phenomena that affect the operation and durability of piping systems.
- Participants will learn to calculate the pipe schedule, and pipe size that serve certain applications.
- Participants will learn different methods of pipe inspection and testing based on related Codes and Standards
- Participants will be exposed to different methods of checking pipe flexibility.

**WHO SHOULD ATTEND**

Engineers and Technicians of mechanical and chemical engineering backgrounds will benefit largely from this workshop. Maintenance, Operation, inspection, and R and D People should also attend this course.

**TRAINING METHODOLOGY:**

A highly interactive combination of lectures and discussion sessions will be managed to maximize the amount and quality of information and knowledge transfer. The sessions will start by raising the

*DMCT/OL/9/18(Rev3Dt:23/9/18)*

most relevant questions and motivating everybody to find the right answers. You will also be encouraged to raise your questions and to share in the development of the right answers using your analysis and experiences. Tests of multiple-choice type will be made available daily to examine the effectiveness of delivering the course.

All presentations are made in excellent colorful PowerPoint. Very useful Course Materials will be given.

- 30% Lectures
- 30% Workshops and work presentation
- 20% Group Work & Practical Exercises
- 20% Videos & General Discussions

**COURSE OUTLINE: -**

The Following Topics will be covered in this course over five days.

**Basics of Piping**

Pipe Dimensions and Schedule number

Pipe Manufacturing Methods

Welded and Seamless Pipes

Pipe Drawing Symbols

Types of pipes – application-wise

Standard pipe

Pressure pipe

Line pipe

**Piping Materials**

Chemical properties

Mechanical properties

Physical properties

Property stability

Classification of steel

Steel heat treating practices.

Aging of properties

[www.definettraining.com](http://www.definettraining.com)

**Piping Codes and Standards**

ASME Boiler and Pressure Vessel Code

ASME B31: Code for pressure piping

API Specifications (Spec), Recommended Practices (RP), and Standards (Std.)

Spec. 5L-90: Specification for Line Pipe

American Welding Society - AWS Welding Handbook

**Pipeline Design**

1. Design Parameters

Maximum Operating Pressure

Flow Rate of Oil or Gas

DMCT/OL/9/18(Rev3Dt:23/9/18)

Delivery Pressure  
Pressure Drop  
Pumping Power  
2. Failure Theories  
3. Design Criteria  
Maximum Allowable Stress  
Maximum Allowable Pressure  
Construction Factor  
4. Steel Selection  
5. Pipe Sizing  
Pipe Diameter  
6. Pipe thickness calculation  
Pipe Schedule

Pump and Compressor Stations  
Originating and booster Stations  
Pump Selection  
Parallel and Series Operation

Pipeline Installation  
Off-shore and on-shore installations

Welding Techniques  
Welding Processes  
Welding Procedures  
Weld Passes

Inspection and Testing  
Visual Inspection  
Non-Destructive Testing  
Class designation  
Hydrostatic testing

Pigging for Cleaning and Monitoring  
Types of Pigs  
Monitoring Internal Corrosion  
Pipe Repair

Buried pipelines.  
Corrosion and Cathodic Protection  
Pipe Coating

Stress Analysis  
Flexibility Analysis Methods  
Flexibility Analysis Demonstration  
Equipment Load Limits
