

Training Title

LV/MV/HV CIRCUIT BREAKERS (SWITCHGEAR): INSPECTION, MAINTENANCE, DESIGN, REPAIR & TROUBLESHOOTING

Training Duration

5 days

Training Venue and Dates

REF EE027	LV/MV/HV Circuit Breakers (Switchgear): Inspection, Maintenance, Design, Repair & Troubleshooting	5	24-28 June 2024	\$5,500	Dubai, UAE
---------------------	--	---	-----------------	---------	------------

In any of 5 star hotel. Exact venue will be informed once finalized

Training Fees

- \$5,500 per participant that includes Materials/Handouts, tea/coffee breaks, refreshments & Buffet Lunch

Training Certificate

Define Management Consultancy & Training Certificate of course completion will be issued to all attendees.

Language: English

TRAINING OVERVIEW

TRAINING DESCRIPTION

This course introduces the basis of understanding the theory of high voltage switchgear covering LV/MV/HV circuit breakers and the equipment included in the switch gears. It also introduces the practice and testing of switchgear & by the end of this course the trainee should be able to:

- Demonstrate the components of different voltage switchgear.
- Demonstrate the maintenance and testing procedures used for different voltage switchgear.
- Apply the safety precautions of P.M. on switchgear.
- Know how to calculate the short circuit level.
- The transient phenomena in power systems
- Understand the arc phenomena and circuit interruption.
- Know the different types of circuit breakers and industrial switchgears.
- Be able to select the proper specifications of CB and switchgears.
- Know the maintenance procedures.
- Be able to do all tests on circuit breakers.
- Be able to detect circuit breakers troubleshooting.

DMCT/OL/9/18(Rev3Dt:23/9/18)

- Know the methods of system earthing and protection requirements.
Be able to control circuit breakers with associated relaying systems.

TRAINING OBJECTIVES

Delegates will gain an overall appreciation of the applicable standards and working practices for:

- Fundamental of Circuit Breaker
- Types of Low and Medium Voltage Circuit Breaker
- HV
- Switch Gears
- Insulation and maintenance of CB
- Over current trip equipment
- Testing of Low and Medium CB

WHO SHOULD ATTEND

Managers, Engineers and Technicians, responsible for the design, installation, testing and operation of electrical substations and power stations, who require refreshing their knowledge and skills in working with circuit breakers at low and medium voltage level. Technicians and engineers who are responsible for maintaining, testing and troubleshooting of HV/MV/LV switchgear.

TRAINING METHODOLOGY

A highly interactive combination of lectures and discussion sessions will be managed to maximize the amount and quality of information and knowledge transfer. The sessions will start by raising the most relevant questions and motivate everybody to find the right answers. You will also be encouraged to raise your own questions and to share in the development of the right answers using your own analysis and experiences. Tests of the multiple-choice type will be made available on a daily basis to examine the effectiveness of delivering the course.

Very useful Course Materials will be given.

- 30% Lectures
- 30% Workshops and work presentation
- 20% Group Work & Practical Exercises
- 20% Videos & General Discussions

TRAINING OUTCOME

www.definettraining.com

By the end of this course the participants will gain the following;

- Know how to calculate the short circuit level.
- The transient phenomena in power systems.
- Understand the arc phenomena and circuit interruption.
- Know the different types of circuit breakers and industrial switchgears.
- Be able to select the proper specifications of CB and switchgears.
- Know the maintenance procedures.
- Be able to do all tests on circuit breakers.
- Be able to detect circuit breakers troubleshooting.

DMCT/OL/9/18(Rev3Dt:23/9/18)

- Know the methods of system earthing and protection requirements.
- Be able to control circuit breakers with associated relaying systems.

WORKSHOP KEY TOPICS

- Basic Concepts of Power Systems (Generation, Transmission and Distribution of Power)
- Electrical Network Systems (single & three phase; balanced & unbalanced; positive, negative & zero sequence networks)
- Breaking of AC current
- Introduction on Switchgears
- High voltage switchgear
- Low & medium voltage switchgear
- Switchgear testing.
- Typical example of Maintenance of M.V SF6 breaker and switchgear assembly.
- Typical example of Maintenance of M.V vacuum breaker and switchgear assembly
- Functions of Circuit Breakers
- Circuit Breaker Components
- Design Features of Circuit Breakers
- Application of Circuit Breakers (Generators, Motors & Transformers Protection)
- Description of some reputed make Circuit Breakers
- Installation and Commissioning of Circuit Breakers
- Testing of Circuit Breakers
- Analysis of Circuit Breakers Performance
- General Maintenance of Circuit Breakers
- Application of CBM on Circuit Breakers
- Modern Trends

COURSE OUTLINE

Introduction

- Electrical engineering basic concepts
- Three phase review and per unit
- Voltage levels
- One line and three-line diagram
- Generation system layout
- Transmission system layout
- Substation system layout
- Distribution system layout

Industrial Switchgears

- Fuses
- Auto-reclosers
- Automatic sectionalized
- Circuit Breakers
- Isolator switches
- Load switches
- Relays

DMCT/OL/9/18(Rev3Dt:23/9/18)

- Current transformers
- Voltage transformers

CB Design Specification Based on Short Circuit Current Level

- Per unit system
- Faults on power systems
- Transient phenomena in power system.
- Symmetrical component analysis of three phase network
- Network connection for various fault types
- Current and voltage distribution in system due to a fault
- Effect of system on zero sequence quantities
- Computer programs based short circuit calculation.

CB Design Specification Based on Arc Phenomena and Circuit Interruption

- Arc phenomena
- Maintenance of the Arc
- Properties of Arc
- Arc Interruption theory
- Circuit Breaker Rating
- Circuit constants and circuit conditions
- Conditions of severity
- Restriking voltage transient
- Class A ultra-fast transients
- Class B system transients
- Class C low transients
- Transmission line transient
- Switching transients
- Duties of Switchgear

LV Circuit Breakers

- Low voltage molded case current limiting circuit breakers
- Low voltage molded case circuit breakers with high breaking capacity
- Insulated case circuit breakers
- Low voltage air circuit breakers
- Low voltage circuit breakers specification

Modern MV and HV Vacuum CB

- Introduction
- Advantages of vacuum interruption
- Vacuum contactors and interrupters
- The vacuum medium
- The vacuum arc
- Vacuum arc stability
- Vacuum break down

DMCT/OL/9/18(Rev3Dt:23/9/18)

- Vacuum switch construction
- Applications of vacuum circuit breakers

Modern MV and HV SF6 CB Introduction

- Basic Features of SF6 Breakers
- Dielectric properties of SF6
- Quenching properties of SF6
- Construction of SF6 breaker
- SF6 CB types
- Puffer type SF6 breakers
- Double Pressure System
- Single Pressure Puffer-Piston System
- Single Pressure Self Blast System
- Improvement in SF6 Breakers for HV

Other Type of Circuit Breakers

a) Air Circuit Breakers

- Method of increasing arc resistance
- Plan break type
- Magnetic blow out type
- Arc splitter type
- Application
- Construction and operation
- Axial air CB
- Blast air CB

b) Oil Circuit Breakers

- Arc rupture under oil
- Advantages of oil
- Disadvantages of oil
- Plan break oil circuit breakers
- Arc control circuit oil breakers
- Minimum oil circuit breakers
- Construction and operation

c) Dc Circuit Breakers

- Construction
- Methods of interruption
- Application

Circuit Breaker Inspection, Maintenance and Services

- Inspection
- General inspection technical procedure
- Daily inspection of circuit breakers
- Monthly inspection of circuit breakers
- Annual inspection of circuit breakers
- Disassembly

DMCT/OL/9/18(Rev3Dt:23/9/18)

- Cleaning
 - Tightening
 - Lubrication
 - Equipment used in testing
 - Testing procedure
 - Direct testing
 - Contact resistance test.
 - Insulation resistance test
 - Test report
 - Indirect testing
 - One hour Video, HV CB Maintenance and Repair)
- **Circuit Breakers Control, Protection and Testing**
 - Switchgears control devices and wiring
 - Switchgears protection devices and wiring
 - Testing Classification
 - Testing laboratories
 - Description of a simple testing station.
 - **CB Troubleshooting**
 - Low insulation Resistance (below 2000 Mega-ohms) between a) Phase terminal and earthed frame, with breaker closed b) Phase terminals of a pole.
 - Resistance between Terminals of Pole too high (above 100 microohms) (15 micro-ohm per joint) contact
 - Unequal contact Wipe and Travel in 3-pole Measured from top surface of interrupter flange and the contact lip by a simple rod with a) breaker open and b) breaker closed
 - One of the pole docs not close.
 - Breaker operation too Slow During opening timing from trip command to contact separation instant too large (60 Ms instead of say 40 Ms)

NOTE:

Pre & Post Tests will be conducted.

Case Studies, Group Exercises, Group Discussions, Last Day Review & Assessments will be carried out.
